XTREME

Project title: "Mixed Reality Environment for Immersive Experience of Art and Culture"

Project description: XTREME is an EU Horizon 2020 project that aims to explore and provide a mixed reality (MR) solution to experience different forms of art. The project is in close collaboration with 14 different partners and together we will explore different alternatives to the traditional way of accessing music and art experiences.

Objectives: In XTREME, we aim to develop a mixed reality (MR) solution that enables concerts and performing art events to be experienced remotely without requiring physical attendance at the venue. Our technology is enhancing the immersive quality of the events by seamlessly integrating real and virtual content. Additionally, our solution fosters shared, realistic experiences, allowing users to engage with their selected social circles in a virtual space.

Duration: January 2024 – December 2026

CONTACTS

XTREME Project Coordinator
Prof. Sami S. Brandt
(on the picture)
IT University of Copenhagen, Denmark
